TOMUS XXXVIII — 1976 — 38. KÖTET

László Kalmár 1905—1976 ..... 221—222
Ando, T., Lebesgue-type decomposition of positive operators ..... 253—260
Apostol, C., Foiaş, C. and **Voiculescu, D.**, Strongly reductive opeators are normal ..... 261—263
Barnes, B. A., On thin operators relative to an ideal in a von Neumann algebra ..... 265—274
Bekes, R. A., A convolution theorem and a remark on uniformly closed Fourier algebras .. 3— 6
Bercovici H., Jordan model for some operators ..... 275—279
Ceauşescu, Z., On intertwining dilations ..... 281—290
Cohen, L. W., On differentiation ..... 239—251
Csákány, B., Conditions involving universally quantified function variables ..... 7— 11
Csörgő, S., On an asymptotic expansion for the von Mises ω^3 statistic ..... 45— 67
Dressler, R. E. and **Pigno, L.**, Modification sets and tranfsorms of discrete measures..... 13— 16
Feigelstock, Shalom, Extensions of partial multiplications and polynomial identities on abelian groups ..... 17— 20
Gécseg, F., On products of abstract automata ..... 21— 43
Herrero, D. A., Universal quasinilpotent operators ..... 291—300
Holland, A. S. B., Sahney, B. N. and **Tzimbalario, J.**, On degree of approximation of a class of functions by means of Fourier series ..... 69— 72
Joó, I., A remark on convergence systems in measure ..... 301—303
Joó, I. and **Tandori, K.**, A remark on convergence of orthogonal series ..... 305—309
Jürgensen, H., Zur Charakterisierung von Vereinigungserweiterungen von Halbgruppen. 73— 78
Kovács, I. and **Mocanu, Gh.**, Unitary dilations and C^*-algebras ..... 79— 82
Langer, H., Factorization of operator pencils ..... 83— 96
van Leuwen, L. C. A., Rings with e as a radical element ..... 97—102
Leindler, L., An integrability theorem for power series ..... 103—105
Leindler, L., On the strong approximation of Fourier series ..... 317—324
Leindler, L., Generalization of a converse of Hölder's inequality ..... 107—112
Liebermau, A., Finite type representation of finite symmetric groups ..... 113—114
Lovász, L. and **Marx, M. L.**, A forbidden substructure characterization of Gauss codes .. 115—119
Lubin, A., J-symmetric canonical models ..... 121—126
Móricz, F., On the convergence properties of weakly multiciplicative systems ..... 127—144
Móricz, F., Probability inequalities of exponential type and laws of the iterated logarithm 325—341
Nagy, B., Spectral mapping theorems for semigroups of operators ..... 343—351
Németh, J., Note on an embedding theorem ..... 353—358
Nieminen, J., Derivations and translations on lattices ..... 359—363
Okada, M. and **Yabuta, K.**, An inequality for functions ..... 145—148
Pták, V., An inclusion theorem for normal operators ..... 149—152
Rindler, H., Uniformly distributed sequences in quotient groups ..... 153—156

Stachó, L. L., On the volume function of parallel sets ..... 365—374
Stern, M., On radicals in lattices ..... 157—164
Szász, F., Ringe in welchen jedes Element ein Linksmultiplikator ist ..... 165—166
Szász, G., Decomposable elements and ideals in semigroups ..... 375—378
Szász, G., Unitary subsemigroups in commutative semigroups ..... 379—381
Szendrei, A., Idempotent reducts of abelian groups ..... 171—182
Szenthe, J., Sur la connexion naturelle à torsion nulle ..... 383—398
Sz.-Nagy, B., Diagonalization of matrices over H^∞ ..... 223—238
Sz.-Nagy, B. and Foiaş, C., Commutants and bicommutants of operators of class C_0..... 311—315
Takács, L., On some reccurence equations in a Banach algebra ..... 399—416
Tandori K., Bemerkungen zur Konvergenz der Reihen nach multiplikativen Funktionensystemen ..... 167—170
Teodorescu, Radu I., Fonctions caractéristiques constantes ..... 183—185
Tomilenko, V. A., On a property of strictly logarithmic concave functions ..... 417—421
Wadhwa, Bhushan L., A note on reductive operators ..... 187—189
Wilczyński, W., Finite partitions of the real line consisting of similar sets ..... 191—192
Williams, L. R., Similarity invariants for a class of nilpotent operators ..... 423—428
Wu, Pei Yuan, Cummutants of $C_0(N)$ contractions ..... 193—202
Yap, Leonard Y. H., On a convolution theorem ..... 203—204
Correction ..... 205—206

BIBLIOGRAPHIE

F. BACHMANN, Aufbau der Geometrie aus dem Spiegelungsbegriff. — W. BENZ, Vorlesungen über Geometrie der Algebren. Geometrien von Möbius, Laguerre-Lie, Minkowski in einheitlicher und grundlagengeometrischer Behandlung. — D. G. DOUGLAS, Banach Algebra Techniques in Operator Theory. — CARL FAITH, Algebra: Rings, Modules and Categories. — WILHELM FLÜGGE, Viscoelasticity. — TERENCE M. GAGEN, Topics in Finite Groups. — RICHARD B. HOLMES, Geometric Functional Analysis and its Applications. — C. HOOLEY, Applications of Sieve Methods to the Theory of Numbers. — J. E. HUMPHREYS, Introduction to Lie Algebras and Representation Theory. — D. L. JOHNSON, Presentation of Groups. — O. NEUGEBAUER, A history of ancient mathematical astronomy. — G. RINGEL, Map Color Theorem. — J. A. ROSANOW, Stochastische Prozesse, eine Einführung. — MURRAY ROSENBLATT, Random Processes. — C. L. SIEGEL-J. K. MOSER, Lectures on Celestial Mechanics. — ALLAN M. SINCLAIR, Automatic continuity of linear operators. — E. L. STIEFEL-G. SCHEIFELE, Linear and Regular Celestial Mechanics. — GÖTZ UEBE, Produktionstheorie. — M. M. WAINBERG und W. A. TRENOGIN, Theorie der Lösungsverzweigung bei nichtlinearen Gleichungen. — GARTH WARNER, Harmonic Analysis on Semi-Simple Lie Groups I, II. — J. H. WELLS, L. R. WILLIAM, Embeddings and Extensions in Analysis ..... 207—218
